Sports Simulator

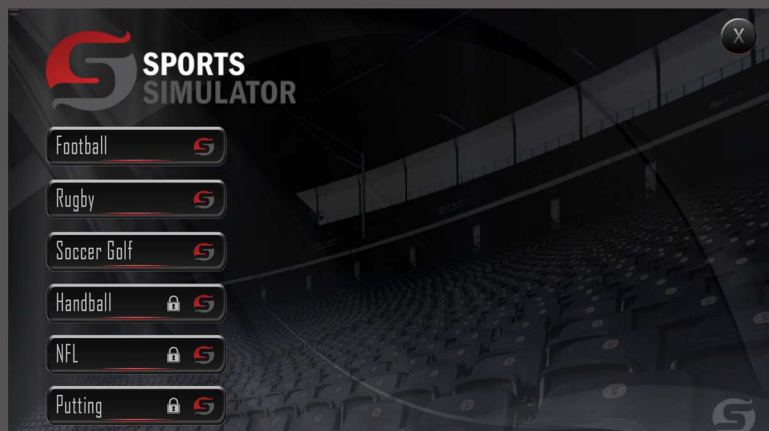

Sports Simulator Limited has developed its unique detection system, which is able to accurately track any moving object and integrate into its Sports Simulation. The Sports Simulator programming team is focused on the development of multi sports simulators and custom sports applications. By the end of 2013 there will be multiple sports available. Sports Simulations currently under development on the Sports Simulator, include Football, Rugby, Soccer Golf, Putting, Tennis, American Football, Australian Rules, Baseball, Basketball, Cricket, Field Hockey, Gaelic Football, Handball and Ice Hockey. Sport Coach Limited our technology partner, has been trading successfully worldwide for over 20 years, in the development of Golf Simulators, Academies and Golf Courses, with the largest product range.

Stadiums

Navigation

The simulator has very user friendly navigation, that is quick to use and easy for players to understand. Simply select the chosen sport to play, scroll through the numerous stadiums and select the desired stadium. It is then a matter of choosing the challenge, when selected a fly through commences from the stadiums tunnel to the chosen challenge.

Graphics

The Sports Simulator has been developed, with the very highest level of realistic three dimensional graphics, enabling players to be fully immersed inside recognisable stadiums. Customised settings offer the choice of several high definition stadiums, levels of difficulty, several, clothing options and animating crowds. Operators can easily choose to alter stadia signage, with sponsors own advertising imagery and movies, maximising the revenues for clients. The Sports Simulators will be constantly updated, with many new features and enhanced functionality.

Contests and Practice

Penalty Shootout allows players to kick real footballs, in realistic penalty shootouts, within their own chosen environment, such as their favourite football stadium. Goal keeper animations are extremely realistic, enabling contests to be easily run for both fun and competition purposes, with results displayed on the leader board. Target Practise has moving targets that the player can shoot at, when targets are hit they fall on to the pitch. The scoring system to be points gained for accuracy, encouraging regular practise and competition use, the targets can also be customised with sponsors own imagery. Other techniques being developed free of charge include, free kicks, corners and passing, to further enhanced players skills.

Technology

Technology the Infrared Laser detection system is very accurate, reliable, easy to install and maintain, without doubt the Sports Simulator is the most advanced in the world. Installation setup is seamless with an automatic calibration program, that determines the height of the room and object recognition for the various objects that can be utilised with the technology. The Sports Simulator is very flexible it can be installed in standard home and office ceiling heights, of 2.4m / 7' 10".
